

ecTrack

Global Project Management for Global Competitiveness

Driving efficient work processes through
systematic communication and event planning

Description

ecTrack is a web-based supply chain event and communication management system that enables members of the supply chain to work together easily and efficiently by keeping track of events as they happen, making sure that critical information is available to all parties at all times. It enables trading partners to define monitor and control key tasks and activities involved in the fulfillment of an order. Seamlessly integrating order (project) management with its e-mail and communication functions.

Benefits

- Speeds up the order process by developing the best possible order schedule
- Optimizes communication between members of the supply chain through real-time sharing of pertinent information such as order schedules, changes and approvals
- Efficiently manages communication by providing a centralized repository of information.

The Plan Module enables an organization to manage their orders using a hierarchical schedule, which includes advanced scheduling options such as leads, lags and sub-plans. Creation and approval of plans may be done within the company or together with a registered Trading Partner. Alert notification, on the other hand, helps the project manager to proactively manage all programs.

Features

- Allows accurate definition of key order details like style, fabric and shipment destination and automatically generates a schedule based on a pre-defined task template
- Enables realistic work process modeling by providing hierarchical project network logic
- Permits a secure, real-time, 24x7 task status tracking with user-configurable alert notification
- sends and retrieves information based on user-defined, customizable categories for rapid message mining
- Interfaces with legacy systems for centralized and automated palm updates
