ASNxFGA

The Complete Garment Order Fulfillment Solution

Satisfying client requirements and reducing costs
through optimized outbound logistics
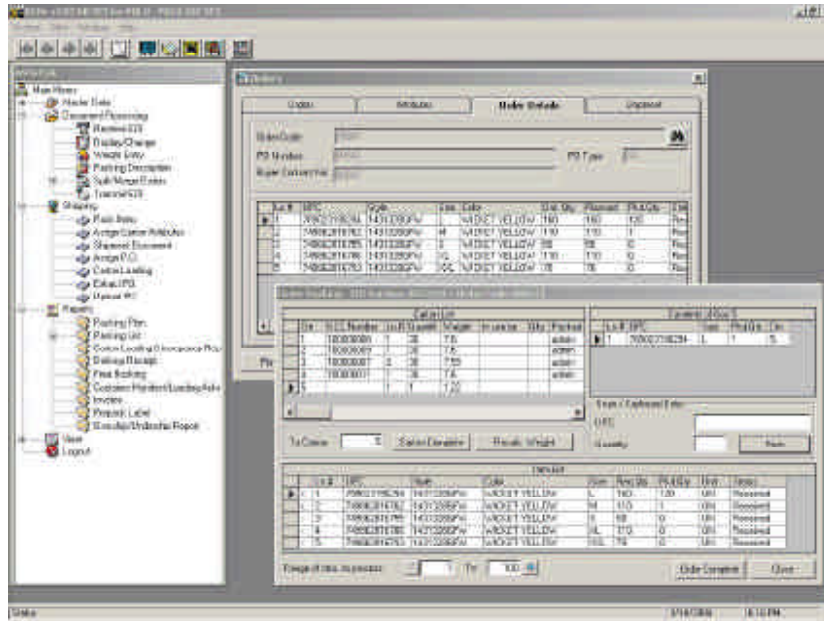

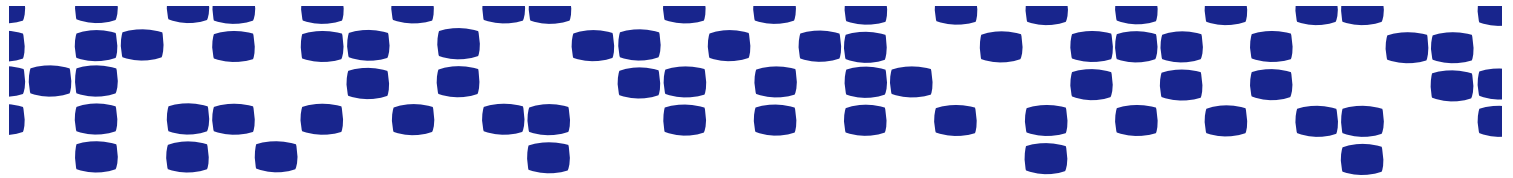

Description

ASNxFGA is an order fulfillment solution for Finished Goods that
eliminates many potential sources of errors associated with the packing
process. It is a scan-pack system that maintains the accuracy of data and
ensures that the processes involved in the packing of finished goods and
generation of standard documents are in compliance with buyer
specifications.

Benefits

- Reduces buyer charge backs through its 100% packing and
  shipping accuracy and data integrity via barcode scanning
  technology

- Permits easy identification and tracking of cartons loaded
  in different containers allowing for rapid deployment of goods

- Allows users to perform other value-added activities owing to
  time saved from automatic and error-free generation of
  shipping reports and documents

- Allows factories from different locations to centralize the
  preparation of shipping documents

ASNxFGA Order Screen. Allows user to view vital Purchase Order as received based on the Buyer Electronic Purchase Order.

ASNxFGA Order Packing Screen. The process of a disciplined scanning and packing of items into carton is being guided by this screen. Extensive controls and validation has been designed to cater to various packing method – e.g., controls to support solid pack, single / multiple pre-pack, pick & pack, case pack and garments-on-hanger-hanged. This module provides a single view status of the scanning that user can monitor how many have been packed for an item, which items belong to which carton, who processed a carton or the actual weight of the carton.

Features

- Provides a flexible order management system through Split and Merge Order functions
- Allows for reverse packing processes (with strict controls) like re-opening or unpacking and re-packing of cartons and re-generation of ASN
- Supports a variety of packing modes like Solid Pack. Pre-Pack, Pick & Pack and Garments-on-Hanger-Hanged
- Allows integrated multi-station scanning of goods to meet high volume needs
- Generates UCC Compliant Shipping and Carton Labels, Packing Lists and Shipping Documents
- Has a multi-language capability
